UX and UI design - Overlay maker app for speech generating devices

Mission

Client, Developer, Agent Zero

Key Stakeholders

\$5,000

4-5 weeks

Rough Agent Zero Budget

Agent Zero Timeline

Speech generating devices “talk” for those who cannot speak on their own due to either cognitive and/or physical disabilities. An “overlay” is a visual guide (image, text or both) to the speech options the user can activate by pressing that spot. Think of a BINGO card with words on it. Touch the spot, and the device speaks the word or phrase. Agent Zero helped design an App to allow parents and speech language pathologists to create and manage overlays to address speech needs in a wide variety of circumstances – at a restaurant, in a school, or at the playground. The App comes pre-loaded with templates for all of the company’s assistive technology products along with a library of picture symbols, custom text options and the ability to take your own pictures or download from the internet - a huge time saver over creating your own overlays from scratch!
